SUMMARY

14+ years of experience in IT as a developer, senior developer, analyst, team lead, PM, head of department, even CTO, but the most liked area - is the web-design.

My strongest skills in the developer role are Node.JS/Express or PHP + jQuery (and the full stack of corresponding technologies such as HTML5, CSS3 etc.) for the rich web-based software.

Remarkable knowledge level in the software development and support processes. Some of these things I'd like to forget.

Creative person. I have nice sense of what is good and what is bad (especially), as well as sense of humor, sometimes black humor. Good taste in design.

Team leadership, team work. Distributed teams. Standalone work. Solid experience in design, implementation and support of complex distributed systems based on relational RDBMS. Data replication, data flow, data management, data collisions, data anything.

Professional, hard-working, self-motivated, goal-oriented individual. I like coffee with brandy, cookies and The Big Bang Theory.

You can contact me via Lexey111@gmail.com by email or Google Hangout. Skype is **lexey111**.

*Sincerely yours,
Lexey.*
